The growing challenge in healthcare around the world fuels our work to release the power of single-use devices and transform ideas into breakthrough solutions that work for life.

# King Vision® video laryngoscope

- Advanced imaging technology and unparalleled ergonomic design. Visionary performance in the palm of your hand.
- Unique flexibility from the choice of two blade types - standard and channeled - depending on the user technique and complexity of the airway. Choose what is right for you.
- King Vision® is designed to visualise the vocal cords indirectly which can help minimize the need for tissue manipulation and improve the ability to see anterior airways.

## PORTABLE

- King Vision® is light weight, self-contained, battery operated and water resistant.
- King Vision® can be used continuously about 80 minutes making it highly portable.
- Blades are individually packaged. Each blade is disposable, eliminating concerns about cross contamination.
- King Vision® has a High Intensity TFT LCD display that creates clear image viewing in 160°panoramic field which is also beneficial in teaching situations.

## AFFORDABLE

- Disposable aBlades allow economical use of the King Vision® video laryngoscope for all intubations. With the addition of the aBlade configuration you have an excellent solution to the problem of limited availability of advanced imaging devices in the OR.
- With the King Vision® you can improve patient care by having high performance visualisation capabilities for every intubation, at an affordable price.

## DURABLE

- Designed to be your primary tool for all intubations.
- Video output capability is compatible with external monitors and recording devices.
- The robust, full-colour, non-glare display can resist repeated cleaning and normal use wear and tear. The video adapter is made from durable materials that can withstand repeated use.
